

THE LISTENING PROGRAM

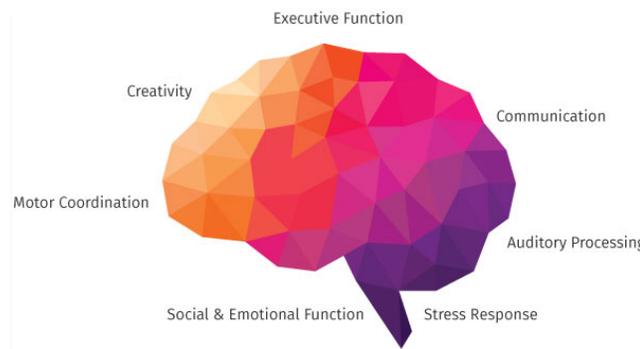

at Carolinas Biofeedback Clinic

What is The Listening Program?

The Listening Program (TLP) is a unique fusion of both science and art culminating in a musical training program that can effect real brain change. Music is recorded and produced by Advanced Brain Technologies to the highest audio recording standards and implement advanced neuro-acoustic production processes. Our Certified TLP Provider will create a personalized protocol and oversee the training from start to finish.

The Benefits of TLP:

The Listening Program is a home-based, portable system that easily fits into a busy lifestyle. The client listens to a fifteen minute module twice a day, five days a week. Waves, Advanced Brain Technologies' multi-sensory bone conduction audio system, provides rocket-fuel to the progress seen by using one of the programs of The Listening Program. In doing this, the client enjoys classical music while the science behind it has global effects on the brain to improve mental, physical, and emotional health.

Am I a Candidate?

The Listening Program is an excellent tool originally created as an intervention for Auditory Processing Disorder. Twenty years of technological advancements since then means that a protocol exists for intervention, learning, wellness, communication, and performance needs. Custom protocols address ADHD, Autism Spectrum, PTSD, and Sensory issues. Details for each protocol are listed on the right.

How to Set-Up your First Appointment:

1

Go to cbfclinic.com

Click on either
"Register" or
"Appointments"
in the menu bar

2

Select "**One-Time TLP Assessment and Protocol Planning**" in either location

3

Search available appointments and Book
